

Resource: 19. Gathering data to measure the extent of beach litter on a beach -  
Biology/Science Fieldwork

Appendix: 19.4 - Traced map

Traced map – this can be used to delineate sections in the map for points of reference in which the different groups of learners can investigate.

Each line on the map above may indicate the line for sampling for different teams. Lower ability learners or teams with less members may work on shorter lines.
